

Women Safety Band – Action Plan

Overview:

The Women Safety Band is a smart wearable device designed to provide instant help during emergencies. It sends alerts, shares live location, streams audio/video, and records audio/video evidence that is securely saved on the device and connected phones for future proof.

Key Features:

- One-touch SOS alert
- Real-time GPS location sharing
- Live audio/video streaming to contacts and police
- Audio/video recording with secure storage (device + mobile phones)
- Loud alarm for immediate attention

Action Plan:

Phase 1 (0–3 months): Finalize prototype, test core features (SOS, GPS, alerts, recording), and develop mobile app integration.

Phase 2 (3–6 months): Build 500–1000 units, conduct field testing, improve reliability, and prepare manufacturing setup.

Phase 3 (6–12 months): Start mass production (5000+ units), launch online, and begin government & CSR partnerships.

Cost Overview:

Estimated cost per unit: Rs. 2,000 (large scale).

Total funding required: Rs. 4–5 crore for full growth, including manufacturing, team salaries, app development, marketing, and operations.

Additional buffer: approx. Rs. 30 lakh reserved for early-stage losses and operational stability.

Timeline:

Prototype to market-ready product: 6–12 months.

Break-even expected around Year 2–3 with strong growth thereafter.

This plan focuses on building a scalable, reliable, and impactful safety solution for women across India.
